NOTES

- * STREETS ON THE RESURFACING LIST ARE SUBJECT TO CHANGE DUE TO BUDGET AND EMERGENCIES
- ** STREET RESURFACING INFORMATION WILL BE UPDATED MONTHLY
- *** SOME STREETS MAY REQUIRE PREPARATION WORK INCLUDING PATCHING, MILLING OF THE EXISTING SURFACE, ETC. PRIOR TO RESURFACING

2" Asphalt Overlay - Resurfacing of roadway with a 2" thick mat of hot mix asphalt placed over existing road surface.

Full Depth Reclamation w/
Asphalt Overlay - The surface of roads that are cracked or deteriorated are pulverized along with some of the roads base material to a depth of 8". 100% of the existing road material is reused and Portland cement is added to the mixture to stabilize and strengthen the road base. The new base is shaped and compacted and a new asphalt surface course is installed - usually 2-3" of hot mix asphalt.
