I, _____ certify that those portions of the building which
(Building Owner or Agent)

will be affected by the proposed work have been inspected for asbestos as required by §36-99.7 of the Code of Virginia *, and that any response action to be undertaken will comply with the NESHAP "Clean Air Act" and OSHA Standards for Construction Workers. If exempt, check reason:

- ** A ___ The building is a single-family dwelling.
- ** B ___ The building is residential housing consisting of four or fewer dwelling units.
- C ___ The initial building permit was issued after January 1, 1985.
- D ___ The combined amount of asbestos-containing material is less than 260 linear feet on pipes or less than 160 square feet on other facility components where the length or area could not be measured previously.

I also certify that any asbestos abatement area will not be reoccupied until all response actions have been completed and final air monitoring clearances have been measured. The final clearance levels for reoccupancy of the abatement area shall be 0.01 or fewer asbestos fibers per cubic centimeter if determined by Phase Contrast Microscopy Analysis (PCM) or 70 or fewer structures per square millimeter if determined by Transmission Electron Microscopy (TEM).

(Building Address)

(Signature of Owner or Agent)

(Date)

* Copy of Code of Virginia §36-99.7

** A or B not to be used as an exemption if use is for commercial or public development.

Revised June 2000

UNIFORM STATEWIDE BUILDING CODE

§ 36-99.7. Asbestos inspection in buildings to be renovated or demolished; exceptions.

- A. A local building department shall not issue a building permit allowing a building for which an initial building permit was issued before January 1, 1985, to be renovated or demolished until the local building department receives certification from the owner or his agent that the affected portions of the building have been inspected for the presence of asbestos by an individual licensed to perform such inspections pursuant to § 54.1-503 and that no asbestos-containing materials were found or that appropriate response actions will be undertaken in accordance with the requirements of the Clean Air Act National Emission Standard for the Hazardous Air Pollutant (NESHAPS) (40 CFR 61, Subpart M), and the asbestos worker protection requirements established by the Environmental Protection Agency under the Asbestos Hazard Emergency Response Act (AHERA) shall also certify compliance with 40 CFR 763 and subsequent amendments thereto.
- B. To meet the inspection requirements of subsection "A" except with respect to schools, asbestos inspections of renovation projects consisting only of repair or replacement of roofing, floorcovering, or siding materials may be satisfied by a statement that the materials to be repairs or replaced are assumed to contain asbestos and that asbestos installation, removal, or encapsulation will be accomplished by a licensed asbestos contractor.
- C. The provisions of this section shall not apply to single-family dwellings or residential housing with four or fewer units, unless the renovation or demolition of such buildings is for commercial or public development purposes. The provisions of this section shall not apply if the combined amount of regulated asbestos-containing material involved in the renovation or demolition is less than 260 linear feet on pipes or less than 160 square feet on other facility components or less than thirty-five cubic feet of facility components where the length or area could not be measured previously.
- D. An abatement area shall not be reoccupied until the building official receives certification from the owner that the response actions have been completed and final clearances have been measured. The final clearance levels for reoccupancy of the abatement area shall be 0.01 or fewer asbestos fibers per cubic centimeter if determined by Phase Contract Microscopy analysis (PCM) or 70 or fewer structures per square millimeter if determined by Transmission Electron Microscopy analysis (TEM).
